Voprosy sornkith gidrometeorologicheskikh prognozov (Problems of Marine Hydrometeorological Forecasting) Moscow, Gidrometizdat (Gid-met), 1958. 88 p. Krrata alla shcherted. (Series). Itel Spozdnost Agency; USSR. Glavnoye upravleniye gidrometeorologicheskoy sluzhby.

Ed. (Title page): N.A. Melnikiy; Ed. (Inside book): N.M. Goryunikhin. Tech. Ed.: I.M. Zareh.

PURPOSE: This issue of the Institute's Transactions is intended for hydrometeorologists and advanced students in the field.

CONTENTS: This collection of articles deals with the problem of forecasting the onset of seasonal ice phenomena. Individual papers treat conditions in the Japanese, Bering, White, and Caspian Seas, the Dvina, Bug, and Dnepr Rivers. No personalities are mentioned.

References accompany each article.

69 p. (Series: Its: Trudy, vyp. 91) Errata slip inserted. 800 copies printed.

Sponsoring Agencies: Tsentral'nyy institut prognozov; Glavnoye upravleniye gidrometeorologicheskoy sluzhby pri Sovete Ministrov SSSR.

Ed. (Title page); A.I. Karakash; Ed. (Inside book): M.N. Goryushkin;
Tech. Ed.: I.M. Zarkh.

PURPOSE: This issue of the Transactions of the Central Institute of Forecasting is intended for scientific and field workers of the Hydrometeorological Service. It will be of interest to all meteorologists, hydrologists, and oceanographers.

COVERAGE: The articles in this collection deal mainly with the forecasting of water temperature in the open sea and in coastal waters. Methods of long-range forecasting of spring ice behavior are also analyzed. The results of investigating

TITLE: Investigation of Atlantic Ocean currents based on data from buoy stations

SOURCE: Okeanologiya, v. 6, no. 1, 1966, 53-61

TOPIC TAGS: ocean current, ocean dynamics, oceanography

ABSTRACT: Current variations with respect to time and depth at certain points in the Atlantic Ocean are investigated. The effect of atmospheric processes on the current changes is also studied. The analysis of the data shows that 1) the current directions in the Gulf Stream region are subject to a maximum 45% change in depth as recorded at 80% of the stations; 2) the greatest current deviations in direction (100 to 180°) are recorded in the equatorial zone of the Atlantic Ocean and the southern part of the Sargasso Sea; 3) there are marked current differences at 50 to 100 m, and 100 to 1000 m sea levels in the northern part of the Gulf Stream; 4) the smallest daily current variations are in the Gulf Stream region; 5) the gulfs of the northern Atlantic, the southern part of the Sargasso Sea, and the equatorial zone of the Atlantic Ocean reveal the greatest daily variations, up to 100 to 180°; 6) the regions mentioned in 5) show daily velocity changes up to 30 to 50 cm/sec; 7) the equatorial
